Position Green

Position Green acquires Factlines to lead ESG transparency in global supply chains

Oslo, November 4, 2025.

Position Green, a leading Nordic ESG software and advisory firm, has acquired Factlines, a pioneer in supply chain transparency and human rights due diligence solutions. The acquisition, Position Green's third in 2025, further strengthens the company's position as Europe's most comprehensive sustainability platforms. As part of the transaction, Arendals Fossekompani, a Norwegian energy transition and industrial investor, will join as a shareholder in Position Green.

"The acquisition of Factlines is a natural continuation of our strategy to consolidate a fragmented market and build Europe's leading sustainability platform," says Joachim Nahem, Executive Chairman and Co-Founder of Position Green. "We are also proud to welcome Arendals Fossekompani as a new shareholder in Position Green — a partnership that strengthens our shared mission to accelerate the transition toward a more sustainable economy. The next phase of the sustainable business transformation will be defined by integration. Companies need to connect climate, nature, people, and governance into a single strategy, which is exactly what Position Green enables."

Scale, consolidation, and strengthened ownership

Factlines brings over 200 customers to Position Green's existing 800, meaning more than 1,000 organizations now use Position Green's solutions — making the combined platform one of the largest sustainability technology providers globally. As part of the transaction, Arendals Fossekompani (AFK), Factlines' owner and a long-established industrial investment company listed on the Oslo Stock Exchange, will reinvest in Position Green.

"Our reinvestment reflects our confidence in Position Green's ability to scale and build a leading international platform. We see Position Green as a key player in connecting data, technology, and sustainability governance to create measurable impact across industries. The transaction allows us to remain part of the company's next growth phase, alongside a strong partner group, and represents a clear opportunity for long-term value creation " says Benjamin Golding, CEO of Arendals Fossekompani.

Empowering companies to manage impact through the supply chain

Across Position Green's customer base, most of the material impact, both positive and negative, occurs within global supply chains. According to Position Green's 'Sustainable Business Playbook', which analysed 1,900 European companies, only about half report on Scope 3 emissions, even though these typically make up most of their total footprint.

Factlines' technology enables companies to identify, assess, and act on a wide range of ESG and operational risks across thousands of suppliers. The platform supports compliance and audit trails aligned with industry- and sector-specific standards, as well as key regulations such as the Norwegian Transparency Act, the EU Deforestation Regulation (EUDR), and the upcoming Corporate Sustainability Due Diligence Directive (CSDDD). Beyond compliance, Factlines helps companies address broader human rights and environmental expectations, as well as other operational and company-specific supply chain themes.

"We are thrilled to join Position Green and bring our purpose to a wider audience," says Henrik Halvorsen, CEO of Factlines. "Together, we can help more companies understand, manage, and improve the social and environmental footprint of their value chains — and address company- or sector-specific risks to build trust and long-term resilience."

Position Green

Navigating a shifting regulatory and market landscape

The acquisition comes at a time when supply chain resilience and accountability are high on corporate agendas. With the EU struggling to pass unified sustainability legislation, ESG software and advisory providers like Position Green and Factlines play an increasingly important role in enabling companies to act beyond compliance and integrate sustainability into business strategy. This is Position Green's third acquisition in 2025, following Morescope and Greenomy, as part of its strategy to enable companies to manage multiple dimensions of ESG performance through one connected system.

About Factlines

Founded in Norway, Factlines is a leading supply chain and human rights due diligence platform that enables companies to map, assess, and manage ESG risks across suppliers and partners. Its solutions are used by more than 200 organizations across Europe to comply with human rights and environmental due diligence legislation, drive supplier engagement, and promote responsible sourcing.
