

THE COST OF WAITING AND SEEING

Access your year of sustainable business gains

The board comparison is software cost this year against a compliance date that moved to FY2027 or 2029. That leaves out five exposures already costing money today — and the return already being captured by companies that moved first.

TRANSITION RISK

–35%

Lower priced transition risk for disclosers vs. similar peers by 2050.

RETURN PER DOLLAR

\$2.40 – \$7

Average return on a dollar into emissions reduction; 69% of initiatives are profitable.

LIVE THIS QUARTER

€75.36

Per tCO₂ under CBAM's definitive period (Q1 2026), charged on your data quality.

FIVE EXPOSURES RUNNING TODAY — AND WHAT CLOSES EACH ONE

#	EXPOSURE	COST OF A YEAR'S WAIT	POSITION GREEN
01	Carbon pricing, already live	Conservative estimates and supplier averages overstate CBAM liability against real invoices.	Carbon management — auto-calculated Scope 1–3 from spend and activity data.
02	Cost of capital	Without disclosed data you are priced at the peer average, or a lender's conservative estimate.	ESRS reporting — audit-ready statement on a double materiality assessment.
03	Foregone return	41% of initiatives pay back inside three years — unidentified without a baseline.	Scenario modelling and AI forecasting rank levers by expected return.
04	Procurement exclusion	Tier 1 suppliers below the CSDDD threshold still lose tenders on data they can't produce.	Supplier management — risk scoring, tailored questionnaires, group visibility.
05	Compounding data debt	Manual interim data gets retrofitted, not reused — you pay for the process and the system.	One sustainability data hub — entered once, reused across all three.

DATES THAT ARE SET

CBAM definitive period	Live
CSRD reporting, 1,000+ staff, €450m+	FY2027
CSDDD, 5,000+ staff, €1.5bn+	Jul 2029

WHERE AI CHANGES THE COST CURVE

Pre-fill for ESRS reporting from uploaded documents, automated risk scoring across supplier tiers, and decarbonisation forecasting — converting a cost that scales with headcount into a fixed one.

Claim the same numbers a year earlier

Carbon management, ESRS reporting, and supplier management on one data hub.
